

2027 Strategic plan

FIELDWORK STUDIO

Adopted 12 September 2026

Planning horizon: January-December 2027

**Invest in public life.
Build resilience into delivery.**

Practice priorities and pursuit criteria

Approved by Elena Marquez, Daniel Kim and Maya Thompson

Document FW-S05 / Revision 1.0

Direction for 2027

Fieldwork will concentrate growth on major public-realm work, higher education and urban resilience. Mixed use and hospitality remain valuable markets, with selective pursuit of small civic and residential commissions.

Priority	Action	Accountable lead
Grow	Major public realm; higher education; urban resilience	Elena Marquez / Daniel Kim
Maintain	Mixed use; hospitality	Maya Thompson
Selective	Small civic projects; residential	Elena Marquez

Pursuit criteria

Prefer Fieldwork net design fees above approximately \$500,000, multi-phase engagements, a substantial design role and Texas or Southwest locations. A smaller fee can be justified when the client relationship or portfolio value is explicit.

Price-driven competitions, isolated small scopes and remote projects without strategic value require principal review. These are preferences, not automatic eligibility rules.

Capacity before commitment

Noah Williams is a strong public-realm delivery lead but is 91% allocated at the September snapshot. His 60-day allocation is 63%. Priya Shah offers a project-management alternative at 67% current and 54% at 60 days. Confirm January commitments before promising an individual to a client.

Financial & operating guardrails

Measure	Policy / definition
Prior-year revenue	\$8,600,000 net service revenue for FY2025; excludes pass-through subconsultants and reimbursables
Target project gross margin	42%; (net design fee - direct labor cost) / net design fee. Before firm overhead; direct labor cost includes payroll burden.
Typical design fees	Small: \$150,000-\$400,000; mid-size: \$400,000-\$1,000,000; large: \$1,000,000-\$2,500,000+
Fee / construction heuristic	Approximately 2-4% for comparable landscape-led scopes. This is a planning heuristic, not a computed portfolio average. Whole-development denominators can produce much lower ratios.
Fee uncertainty	113 of 164 register entries contain fees; 51 are blank. No project-level cost history is supplied, so realized margins cannot be calculated.

Execution priorities

Q4 2026: update project fee records and confirm key-person commitments before January mobilizations. Q1 2027: formalize a roster of civil, hydraulic and ecology collaborators. Q2 2027: review public-realm pursuits and compare planned staffing with actual effort.

Evidence required at pursuit review

Identify comparable projects and individual contributions. Separate verified qualification requirements from attractive preferences. Confirm outside disciplines, available design fee, schedule assumptions and key-person availability. The principals retain the final pursuit decision.

Source authority

This plan is authoritative for firm preferences and target economics. It does not establish a fee budget for a prospective client or guarantee future capacity. Staffing projections are maintained in the September workbook.
